

Yuqing Zheng *interaction designer*

Interaction designer · ex-Tencent TiMi Studios · ships AI-built products solo

Three and a half years designing interaction for a large open-world title at Tencent TiMi Studios — combat HUD, gameplay systems and cross-platform input — so I am at home in dense, state-heavy interfaces. Since leaving Tencent I have used AI to take my own ideas all the way to release: design, code, deployment and compliance, on my own. **As execution gets cheaper, judgment about what is worth building stays with the designer.**

01 EXPERIENCE

- **Independent AI Product Work** May 2025 – Present
 - Product Design & Build
 - Shipped several real products end to end — design, build, deployment and compliance — through to store submission.
 - Covered product definition, interaction design, AI-assisted development, WeChat Cloud back ends and IP registration.
- **Tencent · TiMi Studios** Nov 2021 – May 2025
 - Game Interaction Designer
 - Designed interaction for *Honor of Kings: World*, an open-world ARPG launching 2026, from production to release.
 - Led the combat HUD end to end — health bars, skill wheel, combat state feedback; owned damage numbers 0→1.
 - Designed complete flows for dungeon, map, housing, pet, achievement and fishing systems.
 - Built cross-platform input design (mobile / PC / console): skill-wheel layout, key mapping, controller bindings.
 - Grew from taking briefs to owning core modules and driving cross-team alignment to ship.
- **Advanced Institute of Information Technology, Peking University — Interaction Design Intern** May – Oct 2021
 - Designed B2B industrial data dashboards, from requirements and IA to final UI.

02 SELECTED WORK

- 2025 **Genesis · WeChat Mini Game** *In store review*
 - Built solo — gameplay, visuals, code and sound; native Canvas in a 3 MB bundle; included company and copyright registration.
- 2025 **Derivatives E-Signing App · Fintech Web** *Deployed*
 - Designed and full-stack built for a live financial workflow: dual-signature flow, duplicate-submission guards, automated PDF archiving; Next.js + Airtable.
- 2026 **Xinjiang Ski · Community Mini-Program** *In development*
 - Designed all 25+ screens; building the front end and WeChat Cloud back end solo, including messaging and a member trust system.
