

Yuqing Zheng

interaction designer

Interaction designer · ex-Tencent TiMi Studios · ships AI-built products solo

3.5 yrs

Tencent TiMi · flagship title

4

real products built solo

0→1

design to deploy and compliance

Three and a half years designing interaction for *Honor of Kings: World* at Tencent TiMi Studios — combat HUD, gameplay systems, cross-platform input — so I am at home in dense, state-heavy interfaces. Since leaving Tencent I have built 4 real products with AI: design, code, deployment and compliance, end to end, on my own.

01 EXPERIENCE

● Independent AI Product Work

May 2025 – Present

— Product Design & Build

Shipped 4 real products through the full loop: product definition → interaction and visual design → AI-assisted development → deployment → store compliance.

Built front and back ends with Claude / Claude Code / Cursor: a native Canvas WeChat mini game, a Next.js fintech app, a full-stack cloud mini-program.

Ran the commercial track most designers never touch: company registration, software copyright filing, platform filing and store review.

● Tencent · TiMi Studios

Nov 2021 – May 2025

— Game Interaction Designer

Core interaction designer on *Honor of Kings: World*, Tencent's top-priority open-world title, from production through launch (2026).

Owned damage numbers 0→1: legibility, distinguishability and feel under heavy on-screen load, tuned frame by frame.

Led the combat HUD end to end — health bars, skill wheel and combat state, budgeting player attention across them.

Designed complete flows for dungeon, map, housing, pet, achievement and fishing systems.

Built cross-platform input design (mobile / PC / console): skill-wheel layout, key mapping, controller bindings; drove cross-team alignment to ship.

● Advanced Institute of Information Technology, Peking University — Interaction Design Intern

May – Oct 2021

Designed B2B industrial data dashboards, from requirements and IA to final UI.

02 SELECTED WORK

2025 Derivatives E-Signing App · Fintech Web

In live business use

Designed and full-stack built for a live financial workflow: dual-signature flow, duplicate-submission guards, automated PDF archiving; Next.js + Airtable, deployed and in use.

2025 Genesis · WeChat Mini Game

100% solo build

Gameplay, visuals, code and sound all built solo; native Canvas in a 3 MB bundle; company and copyright registration done, now in WeChat store review.

2026 Xinjiang Ski · Community Mini-Program

25+ screens, full stack

All 25+ screens designed; front end and cloud-function back end in development solo, including messaging and a visual member trust system.
